Keywords

A successful AdWords campaign is built on good keywords. The more relevant your keywords are to the terms that users are searching for, the more likely users are to click on your ad.

From the Ad Groups page in the Control Centre, you can see details of your keywords' performance on Google search result pages and search/content sites in our ad network. These performance metrics help you identify which keywords you should keep and which you should refine.

To learn how to choose and/or optimise your keywords and increase your ad's exposure, visit www.google.co.uk/optimise.

Keyword URLs and CPCs

A destination URL specifies the web page users go to when they click on your ad.

By default, each ad in an Ad Group has a destination URL that you set, and all ads in an Ad Group share a maximum cost-per-click (CPC). However, the “Edit CPCs/URLs” button on the Ad Group details page lets you set unique destination URLs and maximum CPCs for each of your keywords if needed.

Destination URLs. Send users to different web pages based on the keyword that triggers the ad they see.

Max CPCs. Assign unique CPCs if you want to place more weight on certain keywords in your list.

This is the default CPC for the Ad Group. It's used unless you specify a CPC for a keyword.

Change CPCs and URLs

Enter optional Max CPCs and/or Destination URLs for any keyword.

Use this feature to track traffic by keyword or to manage click costs more closely. If you wish to paste in an entire list of keywords, URLs, and CPCs at once, use the [Edit Keywords and CPC](#) page.
